Product Designer with 4+ years of experience in **research-driven design for complex B2B systems across industrial robotics, automotive cybersecurity, EdTech, and e-commerce.** Run field studies, user interviews, and usability studies, build design systems, and work directly with engineers to ship tools that simplify complex workflows.

WORK EXPERIENCE

UX Designer, Tactile
April 2026 – Present

- **Conducted field studies of robotic workstations at fulfillment centers**, interviewed maintenance engineers and synthesizing findings with AI to identify safety and efficiency risks; presented findings and recommendations to product and engineering teams, leading to deprioritized features and design iterations on flagged risks.
- Designed the information architecture and a consolidated Human-Machine Interface workflow for maintenance engineers, working closely with hardware engineers to design within system limitations. Engineers reported improved efficiency.

UX Research Intern, Fluke
Jun 2025 – Nov 2025

- Planned and moderated usability and concept testing for four key features of Fluke's new calibration management software.
- **Led 23 remote usability testing sessions** with subject-matter experts via Maze, identifying usability issues and mental model gaps that directly shaped key design revisions.
- Partnered with product teams to translate research findings into actionable priorities, helping the team adopt a more evidence-based product development process.

UX Designer, Trend Micro
Nov 2023 – July 2024

- Designed **high-fidelity mockups and interactive prototypes** for a data-protective mobile app used in product demos, contributing to **5+ key business partnerships**.
- Designed the **information architecture** and web pages for a database housing 1,000+ industry-specific cybersecurity vulnerabilities, enabling automotive companies to efficiently access critical security insights.
- Led design audits and built a **design system** of **11 reusable UI patterns** across **4 software platforms**, enhancing cohesive experience across threat identification, detection, analysis, and recovery workflows.

UX Designer, BenQ
Aug 2020 – Jun 2023

- Co-led the end-to-end redesign of a **B2B Device Management System** by conducting 26+ user interviews and designing 6 new features. Enhanced efficiency and management of **100+** digital whiteboards per school across **6,000+** K-12 schools worldwide.
- Created BenQ's first scalable **design system for 5 platforms**, streamlining workflows across 4 cross-functional teams and ensuring a consistent user experience through close collaboration with visual designers and engineers.
- Designed and launched new navigation menu, CTAs, product comparison, category, cart, and checkout pages for **BenQ's e-commerce website**, **increasing product impressions by 70% and reducing online customer service costs.**

EDUCATION

M.S. in Human Centered Design and Engineering
University of Washington | Seattle, WA, USA | GPA: 3.97/4 — Sep 2024 – Jun 2026

Capstone: Deepening museum engagement with AI. Built working prototypes with **Claude Code** to test and present concepts.

B.S. in Communication
National Taiwan University | Taipei, Taiwan | GPA: 4.1/4.3 — Sep 2016 – Jun 2020

SKILLS

Design: UI/UX Design, Product Design, Customer Journey Map, Information Architecture, Wireframing, Storyboarding, User Flow, Design System, Design Patterns, Rapid Prototyping, Design Thinking, User-Centered Design
Research: User Research, User Interview, Competitive Analysis, Survey, Persona, Usability Testing, A/B Testing, Heuristic Evaluation, Personas, Thematic Analysis, Qualitative Coding
Tools: Figma, Claude, ChatGPT, Maze, Adobe Creative Cloud (Illustrator, Photoshop, InDesign, Adobe XD), HTML, CSS, Confluence, Microsoft Office
